

Time Series Data

$\mathbf{X}_{\text{Text}}$ The atrial fibrillation description of ECG textual data with patient records.

$\mathbf{X}_{\text{TS}}$ 24-hour ECG data time-series values

$\mathbf{X}_{\text{New}}$...

Alignment Method

$$f(\mathbf{X}_{\text{TS}}, \mathbf{X}_{\text{Text}}, \mathbf{X}_{\text{New}}, \dots) \rightarrow \mathbf{Y}$$

Large Language Models

Time Series Reasoning

$\mathbf{Y}$ The patient had fibrillation between 2:15 and 3:30 a.m. Combined with the history of hypertension, it would be better if the patient strengthens anticoagulation.
